

Event Management System – A Website Where Users Can Book and Manage Events

The **Event Management System** is an online platform that simplifies event planning, ticket booking, and attendee management. Users can **create events, purchase tickets, receive event notifications, and interact with organizers**.

The system features **event categorization, venue selection, online ticketing, and digital invitations**. Organizers will have a **dashboard to manage bookings, track sales, and promote events**.

The project will integrate **payment gateways for ticket purchases**, and security features like **QR code-based e-tickets** will be implemented. The backend will be built using **Django/Flask**, with a **React.js/Vue.js** frontend.

This platform aims to offer a **comprehensive event management solution** with an emphasis on ease of use and automation.
